

MILITARY INSTITUTE OF SCIENCE & TECHNOLOGY (MIST)

Prospect of tidal energy in Bangladesh

A thesis submitted to the Department of Mechanical Engineering, Military Institute of Science and Technology, Dhaka, on December 2013 in partial fulfillment of the requirements for the degree of B.Sc. in Mechanical Engineering.

SUBMITTED BY

Md. Mahbubur Rahman	ID: 201018030
Md. Minul Hasan Walid	ID: 201018050
S.M. Mahmudul Hasan	ID: 201018055
Md. Ariful Islam	ID: 200818034

SUPERVISED BY

Prof Dr. Muhammed Mahbubur Razzaque
Ph.D. (Japan), M.Sc.Engg. (BUET), B.Sc. (BUET)
Dept. of Mechanical Engineering
Bangladesh University of Engineering & Technology (BUET)
Dhaka 1000, Bangladesh.

SUPERVISOR’S DECLARATION

I hereby declare to the Department of Mechanical Engineering, Military Institute of Science & Technology, Dhaka, Bangladesh that I have checked this thesis “**Prospect of tidal energy in Bangladesh**” and in my opinion this thesis is satisfactory in terms of scope and quality for the partial achievement of the degree of Bachelor of Science in Mechanical Engineering.

STUDENT'S DECLARATION

This is to certify that the work presented in this thesis titled “**Prospect of tidal energy in Bangladesh**” is an outcome of the investigation carried out by the authors under the supervision of **Prof Dr. Muhammed Mahbubur Razzaque**, Dept. of Mechanical Engineering, Bangladesh University of Engineering & Technology (BUET), Dhaka 1000, Bangladesh. This thesis or any part of it has not been submitted elsewhere for the award of any other degree or other similar title.

ACKNOWLEDGEMENT

First of all, praise is due to almighty ALLAH with his compassion and mercifulness to allow us finalizing this undergraduate thesis. We express sincerest gratitude to our supervisor, **Prof Dr. Muhammed Mahbubur Razzaque**, Dept. of Mechanical Engineering, Bangladesh University of Engineering & Technology (BUET), Dhaka 1000, Bangladesh, who has supported us throughout our thesis with his patience and knowledge. We attribute the level of our Bachelor degree to his encouragement and effort and without him this thesis would not have been completed and written.

We are grateful to MIST for funding. It would not be possible to complete this thesis without the financial co-operation of this organization. Finally, we thank our parents for supporting us throughout all our studies at University. We are also grateful to different persons who helps us in different stages of the thesis work.

The Authors

Department of Mechanical Engineering,
Military Institute of Science & Technology,
Mirpur Cantonment, Dhaka-1216, Bangladesh
December, 2013.

ABSTRACT

Tidal energy is one of the cheapest energy that we find naturally like wind energy & solar energy. The source of this energy is water tide. Tidal energy conversion techniques exploit the natural rise and fall of the level of the oceans caused principally by the interaction of the gravitational fields in the planetary system of the Earth, the Sun and the Moon. The main periods of these tides are diurnal at about 24 h and semidiurnal at about 12 h 25 min. A tidal turbine is a device for extracting energy from marine currents, and functions in a manner similar like wind turbine. There are different types of tidal turbine basically they are classified based on their turbine blade orientation. Some of them are called horizontal axis, vertical axis, helical horizontal axis, and helical vertical axis tidal turbine. Turbine shaft is connected with the generator. A generator mainly produce power, changing the kinetic energy of current into a turning force by setting a water turbine in the direction of tidal current. Because of the massive size of the oceans and the prediction accuracy of tidal, it is more preferable than any other renewable sources. While the discussion in this paper focuses mainly on Sandwip, Khepupara and Hiron point. The messages are relevant for other areas that have the potential to engage in Tidal Power. So the main objective of our project is to find which one is best for harnessing potential energy among these three areas.

TABLE OF CONTENTS

LIST OF FIGURES	IX
NOMENCLATURE	XI
CHAPTER I	1
1.1 Background	1
1.2 Problem statement	2
1.3 Objectives	2
CHAPTER II	3
2.1 Basic definition	3
CHAPTER III	6
3.1 The modest forerunners	6
3.2 Past proposals & researches	6
3.3 Existing Tidal Power Projects	8
3.3.1 Seaflow project	8
3.3.2 SeaGen	9
3.3.3 Hammerfest Strom AS	9
3.3.4 La Rance Tidal Power Plant	10
3.3.5 Stingray	11
3.3.6 Annapolis Royal Generating Station	12
3.3.7 Jiangxia Tidal Power Station	13
3.3.8 The Kislaya Guba Tidal Power Station	13
3.3.9 Sihwa Lake Tidal Power Station	14
3.3.10 Uldolmok Tidal Power Station	15
3.4 Power Plant under Construction	16
3.4.1 Incheon Tidal Power Station	16
3.5 Power Plant planned by different countries	16

3.5.1 Dalupiri Blue Energy Project	16
3.5.2 Garorim Bay Tidal Power Station	16
3.5.3 Severn Tidal Power Group – 1989	17
3.5.4 Penzhin Tidal Power Plant Project	18
3.6 Projects in Progress	19
CHAPTER IV	20
4.1 Introduction	20
4.2 Potential Sites in Bangladesh	20
4.3 Drawback of our countries	24
CHAPTER V	25
5.1 Calculation of potential energy	25
5.2 Geographical & data analysis	48
5.2.1 Sandwip Channel	48
5.2.2 Khepupara	49
5.2.3 Hiron point	50
5.3 Result	51
CHAPTER VI	52
6.1 Shape or type number	52
6.2 Turbine selection for small low-head	53
6.2.1 Inclined axis, very low head Kaplan gear turbine	54
CHAPTER VII	55
7.1 Corrosion	55
7.2 Cavitation	55
7.3 Extreme Loading conditions	56
CHAPTER VIII	57
8.1 Conclusions	57
8.2 Recommendations	58

8.2.1 Insufficient proper data	58
8.2.3 Channel selection	58
8.2.4 Environmental concerns	58
8.2.5 High capital costs	58
8.2.6 Turbine selection	58
8.2.8 Resolving the Problems with Tidal Power	59
8.2.8.1 Using small scale technologies	59
8.2.8.2 Resolving environmental concerns	59

NOMENCLATURE

NOTATION

DEFINATION

CD	Chart Datum
MLWS	Mean low water spring
MLWN	Mean Low water neaps
MHWS	Mean high water spring
MHWN	Mean high water neap
MSL	Mean see level
MTL	Mean tide level
HAT	Highest Astronomical Tide
LAT	Lowest Astronomical Tide
MHW	Mean High Water
MLW	Mean Low Water
MHHW	Mean Higher High Water
MLLW	Mean Lower Low Water
DTL	Diurnal Tide Level
MN	Mean Range of Tide
DHQ	Mean Diurnal High Water Inequality
DLQ	Mean Diurnal Low Water Inequality
GT	Great Diurnal Range
