Associate professor Hamidur Rahman

Thesis submitted in partial fulfillment  
of the requirement for the degree of  
*Bachelor of Science*

*in*

*Electrical, Electronics and Communication Engineering*

A Thesis Submitted to  
Military Institute of Science and Technology  
Dhaka-1216, Bangladesh

December 21, 2014

# DECLARATION

We declare that this thesis entitled “Fault Detection and Localization of 8 bit Digital to Analog Converter Circuit (ITC’97 Benchmark Circuit)” is a piece of original research work. This work has not been presented any where before for this award of any degree or diploma.

# Abstract

With the advent of high performance (in terms of speed, power and area) digital circuits, the need for data converters with high accuracy for various kinds of applications, has attracted the attention of scientists and technologists all over the world. The existing literature indicates that there is a need to have a very highly accurate circuit for data converters to achieve these goals. It is really difficult to achieve a fault free circuit with a huge number of components.

In view of this, this thesis proposes a method which works efficiently in conjunction with gain waveforms of faulty & faults free Digital to Analog Converter (DAC) circuit as well as internal node voltages of two stage CMOS Operational Amplifier. We have developed an effective & efficient technique to detect & localize the fault. We have tested this technique on the DAC circuit & manipulated simulation result by Hspice and Matlab program.

# Acknowledgments

This work would not have been possible without the help and support of many individuals. We offer our sincerest gratitude to our supervisor, Associate Professor Hamidur Rahman, who has supported us throughout our research work with his patience and immense knowledge.

We attribute the level of our Bachelor degree to his encouragement and effort and without him this thesis, too, would not have been completed. He taught us how to pursue research and gave us the much needed exposure and skill to think and give shape to our thoughts. He helped to shape the direction of this work and filled in many of the gaps in our knowledge.

We are sincerely grateful to Capt M Mahbubur Rahman sir for his constant support, encouragement and cheerful applause for my accomplishments.

We also want to thank Dept of EECE in MIST for financial assistance which was highly essential for our thesis.

Lastly but not the least we would like to thank our parents for their moral support and encouragement.

# Contents

## Chapter 1

Introduction.....	1-2
1.1 Problem Description.....	1
1.2 Thesis Contribution.....	2
1.3 Thesis Organization.....	2

## Chapter 2

Digital to Analog Converter & Concerned Faults.....	4-11
2.1 Basic Digital to Analog Converter.....	4
2.2 Digital to Analog Converter Classification.....	5
2.2.1. Digital to Analog Converter using Binary-Weighted Resistors: .....	5
2.2.2. Digital to Analog Converter with R and 2R Resistors: .....	7
2.3 Fault models of DA Converter.....	9
2.3.1 Defect Model: Stuck-At Faults.....	9
2.3.2 Stuck on Faults.....	10
2.3.3 Stuck open faults.....	12

## Chapter 3

Related Work.....	13-14
3.1 Fault Testing of Benchmark Circuits.....	13

## **Chapter 4**

Digital-to-Analog Converter ITC'97.....**15-16**

4.1 Operation of 8 Bit Digital to Analog Converter.....15

## **Chapter 5**

Simulation & Result of Faulty & Fault free 8 bit DAC.....**17-65**

5.1 Main Circuit Faults.....17

5.2 Op Amp Faults.....48

5.3 Localization & Percentage of detectable fault.....62

## **Chapter 6**

Conclusion.....**66-67**

**Bibliography**.....**68-69**

**Appendix**.....**70-76**
